■ ■ Description of the principal products, services or missions

ProjectOnNet is an APPLICATION SOFTWARE ASP and SEARCH ENGINE for the global building-construction industries. It will provide owners contractors developers architects engineers and vendors the technology in project collaboration. The ability to easily locate bid opportunities the ability to manage the bidding process. It is a "reverse swap meet" for those in the construction industry including contractors engineers architects suppliers developers and owners etc. One party posts a project including plans on a web site and the others search the site for projects in which they would like to participate. There will be a search matrix* whereby the searchers will be able to search by geographic location type of work contract size etc. Additionally they will be able to quickly identify which set of plans and specs are germane to his/her area of interest and download it for study and estimation purpose and post a bid.
